

2026 ADVISEMENTS

KEY RESULT AREA: Swine Health

ADVISEMENT NUMBER: 2026– A2

SUBMITTED BY: Minnesota Pork Board and Minnesota Pork Animal Health Taskforce

SUBJECT MATTER: National Swine Health Strategy – Producer Led Committee

MOTION: The Minnesota Pork Board moves for the establishment of a producer-led national swine health committee to guide and support the implementation of a coordinated National Swine Health Strategy for the benefit of the U.S. pork producers. An update on implementation progress of the National Swine Health Strategy is to be provided by the National Pork Board to delegates at the 2027 Pork Forum.

Rationale: The National Swine Health Strategy provides an important framework for improving U.S. swine health. To effectively translate this strategy into action, clearly defined tactics, timelines, and tools to measure progress are essential.

Implementation should be guided by a producer-led committee to ensure relevance, accountability and efficient use of industry resources.

A producer-led taskforce will:

- Prioritize proposed tactics to focus limited industry resources
- Define clear actions and measurable outcomes to track progress and demonstrate impact
- Address both the risk of transboundary diseases and the ongoing burden of endemic pathogens, including PRRS and PEDV

This committee shall be established within 60 days of the 2026 Pork Forum to ensure the timely initiation of prioritized tactics that align with the National Swine Health Strategy’s two goals and five priorities.
